

# Smarter manufacturing

Profit optimization for  
plastics processors

## Unlocking the potential of Industry 4.0 technologies

The manufacturing landscape is marked by intense competition, especially for small- to mid-sized plastics companies. You face relentless pressure to optimize operational processes, elevate productivity and drive profitability. Embracing Industry 4.0 technologies – such as the convergence of automation, data exchange and smart manufacturing – can help you find new ways to thrive in this challenging environment.

By harnessing the power of data analytics, you can gain valuable insights into your operations,

identify areas for improvement and make informed decisions. You can also better understand your key profit drivers, which is essential for growth.

## How Wipfli empowers plastics manufacturers

From initial consultation to post-implementation support, our dedicated team works closely with you to understand your unique challenges and goals. We help you enhance your shop floor performance by applying a fresh, holistic perspective to process optimization and continuous improvement.

We also provide ongoing support, training and guidance to help you achieve sustainable, long-term success.

**WIPFLI**

# Tailored solutions for plastics manufacturers

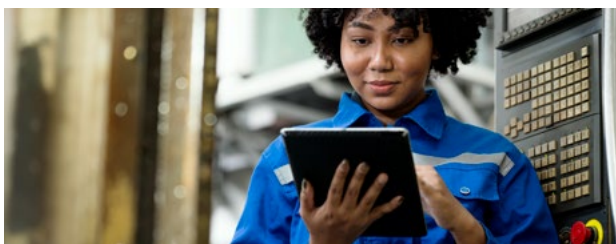

Whether it's optimizing production lines, understanding job profitability or enhancing supply chain efficiency, Wipfli's customizable solutions deliver tangible results and maximize ROI.

We take a comprehensive approach to helping your company with:

## Industry 4.0 technology integration

Through the seamless integration of IoT sensors, automation, robotics and predictive maintenance systems, Wipfli helps you understand how your machines are performing individually and collectively and how to use technology to collect machine utilization data, minimize downtime and enhance overall efficiency in real time.

## Data and analytics

With data at the cornerstone of informed decision-making, our solutions allow you to collect, analyze and interpret data efficiently. We help you leverage real-time insights so that you can identify trends, anticipate market fluctuations, make proactive strategic decisions and stay ahead of the curve.

## Lean process improvement

Through value stream mapping, Kaizen events and Lean Six Sigma methodologies, we collaborate with your leadership to identify bottlenecks, streamline processes and drive sustainable operational improvements.

## Scalability and future-readiness

As technology and market dynamics evolve, scalability and future readiness are imperative for today's manufacturers. We support the seamless integration of our profit optimization solutions with your existing infrastructure so that you have the flexibility you need to future-proof your business.

## Let's get started

We're ready to put your custom growth and efficiency plan in motion. Contact our team to learn about our free four-week software trial for up to eight machines.
